Provides a revolutionary approach to the study of human anatomy which has been shown to improve the outcomes of physical therapies traditionally used to manage pain and other musculoskeletal disorders. Describes a theory which is applicable to all common types of movement, posture analysis and physical treatment modalities. Layout designed to allow the reader to gather the concept quickly or gain a more detailed understanding of any given area according to need. Design icons direct readers to their own specialist areas of interest, e.g. manual therapy, movement therapy, visual assessment, kinaesthetic education or supplementary video material. Appendices discuss the relevance of the *Anatomy Trains* concept to the work of Dr Louis Schultz (Meridians of Latitude), Ida Rolf (Structural Integration) and the practice of Oriental Medicine. Accompanying website ([www.myersmyofascialmeridians.com](http://www.myersmyofascialmeridians.com)) presents multi-media exploration of the concepts described in the book - film clips from Kinesis DVDs, computer graphic representations of the *Anatomy Trains*, supplementary dissection photographs and video clips, webinars, and some extra client photos for visual assessment practice. Text updated in relation to the most up-to-date research originally published at the International Fascia Research Congress, Vancouver, 2012. Includes the latest evidence for the scientific basis of common clinical findings, including preliminary evidence from human fascial dissections. Explores the role of fascia as our largest sensory organ. Contains updates arising out of continual teaching and practice - for example, the role of the fascia and its interconnectivity in the generation of pain and/or force transmission. New chapter discusses the role of *Anatomy Trains* theory in the analysis of gait. Video clips on an associated website ([www.myersmyofascialmeridians.com](http://www.myersmyofascialmeridians.com)) present examples of the concepts explored in the book.
